I claim:

2

1

- 3 21. A one-piece disposable dental articulator comprising:
- 4 a. a body member;
- 5 b. an upper member;
- 6 c. an upper hinge;
- 7 d. a lower member and
- 8 e. a lower hinge.
- 9 22. A one-piece disposable dental articulator according to claim 21 further comprising:
- a. an upper body retention means for securing an upper articulated model;
- b. a lower body retention means for securing a lower articulated model;
- 12 c. an upper member retention means for securing an upper articulated model; and
- d. a lower member retention means for securing a lower articulated model.
- 14 23. A one-piece disposable dental articulator according to claim 22 whereby said one-15 piece disposable dental articulator is made in one-piece.
- 16 24. A one-piece disposable dental articulator according to claim 23 whereby said one-
- piece disposable dental articulator is stamped perpendicular to the vertical length of
- the one-piece disposable dental articulator at the upper and lower quadrants between
- said body member and said upper member to form said upper hinge and between
- said body member and said lower member to form said lower hinge thereby
- 21 allowing free radial motion about the axis of said upper hinge and said lower hinge.
- 22 25. A one-piece disposable dental articulator according to claim 24 whereby said one-
- 23 piece disposable dental articulator is sufficiently resilient to allow for transverse
- 24 motion along the vertical axis of the body member when sufficient force is applied
- 25 in the direction of the desired motion to allow for sufficient lateral and protrusive
- translatory motions and to simulate occlusal and masticatory motions.
- 27 26. A one-piece disposable dental articulator according to claim 25 whereby a plurality
- of alternative configurations for articulating models is possible.
- 29 27. A one-piece disposable dental articulator according to claim 26 selected form the
- 30 group consisting of using said upper hinge by breaching the connection at the upper
- 31 body retention holes to allow free movement of the upper hinge and using said

1	lower hinge by breaching the connection at the lower body retention holes to allow
2	free movement of the lower hinge.

3 28. A one-piece disposable dental articulator according to claim 26 selected form the group consisting of

5

6

7

8

15

member.

- said upper member and said lower member are extended approximately perpendicular to said body member;
- b. said upper member is folded flush against said body member;
- c. said lower member is folded flush against said body member;
- d. said upper member and said lower member are folded flush against said body member.
- 12 passive vertical stop whereby said upper articulated model or said lower articulated model comes to rest flush against the body member preventing further movement along the axis of said upper hinge or said lower hinge in the direction of the body
- 16 30. A one-piece disposable dental articulator according to claim 29 whereby said onepiece disposable dental articulator comprises an adjustable vertical stop selected from the group consisting of an upper screw and a lower screw.
- 19 31. A one-piece disposable dental articulator according to claim 29 whereby said one-20 piece disposable dental articulator comprises at least one mounting plate.
- 21 32. A one-piece disposable dental articulator according to claim 31 whereby said at
 22 least one mounting plate is selected form the group consisting said at least one
 23 mounting plate comprising short retention pins and said at least one mounting plate
 24 comprising long retention pins.
- 25 33. A one-piece disposable dental articulator according to claim 31 whereby said at least one mounting plate comprise a retention grid.
- 27 34. A one-piece disposable dental articulator according to claim 31 whereby a plurality 28 of alternative configurations for articulating models are possible using said at least 29 one mounting plate.
- 35. A one-piece disposable dental articulator according to claim 34 selected form the group consisting of

1	a .	said at least one mounting plate is fixed on said upper member retention means
2		and said lower member retention means whereby said upper member and said
3		lower member are extended approximately perpendicular to said body member,
4	b.	said at least one mounting plate is fixed on said upper member retention means
5		whereby said upper member and said lower member are extended approximately
6		perpendicular to said body member,
7	C.	said at least one mounting plate fixed on said lower member retention means
8		whereby said upper member and said lower member are extended approximately
9		perpendicular to said body member,
10		e. said at least one mounting plate is fixed on said upper body retention
1í		means whereby said upper member and said lower member are extended
12		approximately perpendicular to said body member,
13		f. said at least one mounting plate is fixed on said lower body retention
14		means whereby said upper member and said lower member are extended
15		approximately perpendicular to said body member,
16		g. said at least one recunting plate is fixed on the outside surface of said
17	•	upper member folded flush against said body member,
18		h. said at least one mounting plate is fixed on the outside surface of said
19		lower member foliad flush against said body member, and
20		i. said at least one mounting plate is fixed on the outside surface of said
21		upper member folded flush against said body member and said lower
22		member folded flush against seid body member.
23	36	one-piece disposable dental articulator according to claim 25 made of a material
24	S	relected from the group consisting of metal, plastic, composite, metal with stamped
2ร์	Ì	singes, plastic with stamped hinges, composite with stamped hinges, metal with
26	C	conventional hinges, plastic with conventional hinges and composite with
27	C	conventional hinges.
28	37 . <i>I</i>	A one-piece disposable dental articulator comprising:
29	a.	an "L" shaped lower body member;

30

31

b. an upper member;

c. an upper hinge

	•
1	38. A one-piece dis cost ble dental articulator according to claim 37 comprising:
2	a. an upper member retention means for securing an upper articulated model;
3	b. an upper body retention means for securing an upper articulated model;
4	c. a vertical lower body retention means for securing a lower articulated model;
5	d. a horizontal lower body retention means for securing a lower articulated model;
6	and
7	e. an upper screw.
8	39. A one-piece disposable dental articulator according to claim 38 whereby said one-
9	piece disposable dental articulator is stamped perpendicular to the vertical length of
10	the one-piece disposable dental articulator at the upper quadrant between said "L"
11	shaped lower body member and said upper member to form said upper hinge
12	thereby allowing free radial motion about the axis of said upper hinge.
13	40. A one-piece disposable dental articulator according to claim 39 whereby said one-
14	piece disposable dental articulator is sufficiently resilient to allow for transverse
15	motion along the vertical axis of said "L" shaped lower body member when
16	sufficient force is applied in the direction of the desired motion to allow for
17	sufficient lateral and protrusive translatory motions and to simulate occlusal and
18	masticatory motions.
